Notes about Magic Numbers Tables:

(This sheet pretty much has no meaning until 1/1)

- points a team needs to secure (magic) or lose (tragic) the given playoff spot.

DNCD (Does Not Control Destiny) - team needs other teams to do poorly in order to have a chance to secure the playoff spot.

MW (Might Win) - team can win this spot if they (and everyone below them) earn 0 more points in the season.

IN - team has secured this playoff spot or better.

X - team cannot get this playoff spot.

x FLA			100.00%		FLA in 6
e EDM					

The figure consists of two side-by-side line plots. The left plot shows the 'x' coordinate of 1000 particles over time, with the y-axis ranging from 0 to 140. The right plot shows the 'y' coordinate of the same 1000 particles over time, with the y-axis ranging from -40.0 to 30.0. Both plots show a general upward trend with increasing variance over time, indicating a stochastic process. The lines are colored in a gradient from blue to red, representing different particles.
